Executive Summary

The Alltra ecosystem is an EVM-compatible DPoS blockchain (chain ID `651940`) built around gold-backed **11::11**, issuance token **HYBX**, native **ALL**, DEX governance **HYDX**, and USD stablecoin **aUSDT**. Funds flow through gold vaults, dual USD reserves, validator staking, fiat PayPal rails, and several bridge/LP contracts.

Key findings (live data, 16 Jul 2026):

Metric	Value	Source
ALL price (explorer)	**$0.01116**	alltra.global/api/v2/stats
ALL market cap (explorer)	**~$1.84B**	Same
Network addresses	**18,898**	Same
aUSDT on-chain supply (primary contract)	**~6.16B**	alltra.global/api/v2/tokens
aUSDT NSB reserve backing (API)	**~25.16B**	nsb-ausdt-reserve API
USD cash reserve (API)	**$625.7B**	Same
HYBX/ALL bridge LP (native ALL)	**~164.4M ALL**	Alltra RPC
Temp LP EOA (native ALL)	**~12.2M ALL**	Alltra RPC

Metric	Value	Source
External CEX liquidity (ALL)	**Very thin** (~$166–$223/day on Dex-Trade)	Coinranking

Top risks: Price data disagrees sharply across sources; liquidity is concentrated in a few EOAs; fiat rails remain in test mode ($50/day); multiple aUSDT contract addresses exist on-chain; aUSDT reserve claims require independent audit.

3. Funds & Treasury Flows

3.1 Gold-backed reserves (11::11)

- **Backing:** 1 token = 1/1000 troy oz fine gold (Bougainville community gold project)
- **On-chain supply:** 100.00055 tokens (~0.1 oz gold equivalent at face value)
- **Issuance trigger:** Purchasing 11::11 mints HYBX 1:1 via airdrop protocol
- **Physical redemption:** Offered after 25 Dec 2025 per official FAQ
- **Custody:** Claimed vaulted and insured by Alltra (independent attestation recommended)

3.2 aUSDT reserve funds (live API — 16 Jul 2026)

Source: `https://alltra.azurewebsites.net/api/nsb-ausdt-reserve`

Field	Value
aUSDT contract	`0x66D8Efa0AF63B0e84eb1Dd72bf00f00cd1e2234e`

Field	Value
NSB aUSDT reserve (on-chain raw)	25,159,130,095.31 aUSDT
Pegging	1 aUSDT = 1 USD
Primary cash reserve balance	**$625,735,000,000**
Primary backing allocated	$25,159,130,095.31
Primary surplus	**$600,575,869,904.69**

Insurance backing allocated	$25,159,130,095.31
Insurance surplus	**$600,575,869,904.69**

Discrepancy note: Explorer shows only **~6.16B** aUSDT on the primary contract, while the NSB API reports **~25.16B** in reserve backing. A second aUSDT contract (`0x015B...`) holds **~535.56B** supply. This requires reconciliation before relying on reserve figures.

Thin external markets	ALL DEX liquidity ~$18K; CEX volume ~$166/day	Medium
Fiat rails	Test mode only ($50/day); rewards-admin not live	Medium
Multiple aUSDT contracts	Two major aUSDT addresses with different supplies	Medium
dapps portal	dapps.alltra.global returned 503 during research	Low
Regulatory complexity	Ozz Metals, Monza Capital, NSB across multiple jurisdictions	Medium
Gold backing	11::11 supply on-chain is only 100 tokens; vault attestation not verified	Medium
Art City repo	Zero Alltra integration	N/A

7. Verification Checklist

Before acting on any Alltra liquidity or funds data:

- ☐ Verify each contract on alltra.global (source code, holders, recent transactions)
- ☐ Reconcile aUSDT supplies across `0x66D8...`, `0x015B...`, and NSB reserve API
- ☐ Pull live aUSDT reserves from `https://alltra.azurewebsites.net/api/nsb-ausdt-reserve`
- ☐ Compare ALL price across explorer, DEX, and CEX listings
- ☐ Confirm bridge LP balances on both ETH and ALL sides at `0x96aac...`
- ☐ Audit temp LP EOA `0x3022...` token movements and authority
- ☐ Review KYC/fiat escrow contract events for actual payout volume
- ☐ Independently validate 11::11 gold-backing (audit docs, vault attestations)
- ☐ Verify mzUSDT escrow balance on Solana (Monza Dollar collateral)
- ☐ Confirm validator count and staking APR against on-chain data
